BEARDED IRIS

Iris are easily grown in most any soil and produce their wealth of bloom over a long period, March 15 to May 15. For best results choose a location with at least a half day sun. Spade the soil to a depth of 10 or 12 inches. Spread bone meal over the surface using 3 quarts to 100 square feet. Work bone meal in to a depth of about 5 inches. If planting for mass effect space 1 foot apart, if to be left for 2 or 3 years space 2 to 3 feet apart. Plant rhizome $\frac{1}{2}$ inch below soil level. Firm soil down, water thoroughly and keep soil moderately moist until well established. Water at 2 week intervals thereafter should be sufficient. Light application of Gro-Master or other commercial fertilizer may be applied in fall and again in spring.

Iris should be divided every third year, discarding rhizomes that have bloomed, and replanting the balance.

ORDERS for Iris rhizomes received during our show will be delivered properly packed by truck or parcel post pre-paid, between June 15 and July 1. Rhizomes will be available through September.

About 100 varieties of Iris are available, mostly in bloom, in gallon containers. These are ready for immediate delivery.

PRICES. Prices unless otherwise noted are for rhizomes.

No C.O.D. orders please.

All varieties bloom in mid season and are of average height unless otherwise noted.

SEE OTHER SIDE for Sale Items.

ALASTOR. Delicate tints of deep Cyclamen pink underlaid with old gold. Tall. Mid to late. 60c; 3 for \$1.50; 1 gal., 95c.
